

Slide the Seat Hook under the seat plank and into the Table Mover Post and secure it.

Slip the first Lifting Pin under the plank and swing its handle into the locking loop.

Raise the Table Mover post to a vertical position.

Install the second Lifting Pin and secure it. Repeat the installation on the opposite seat plank.

Lift one end of the table and roll it away. The Table Mover fits most brands and styles of tables.

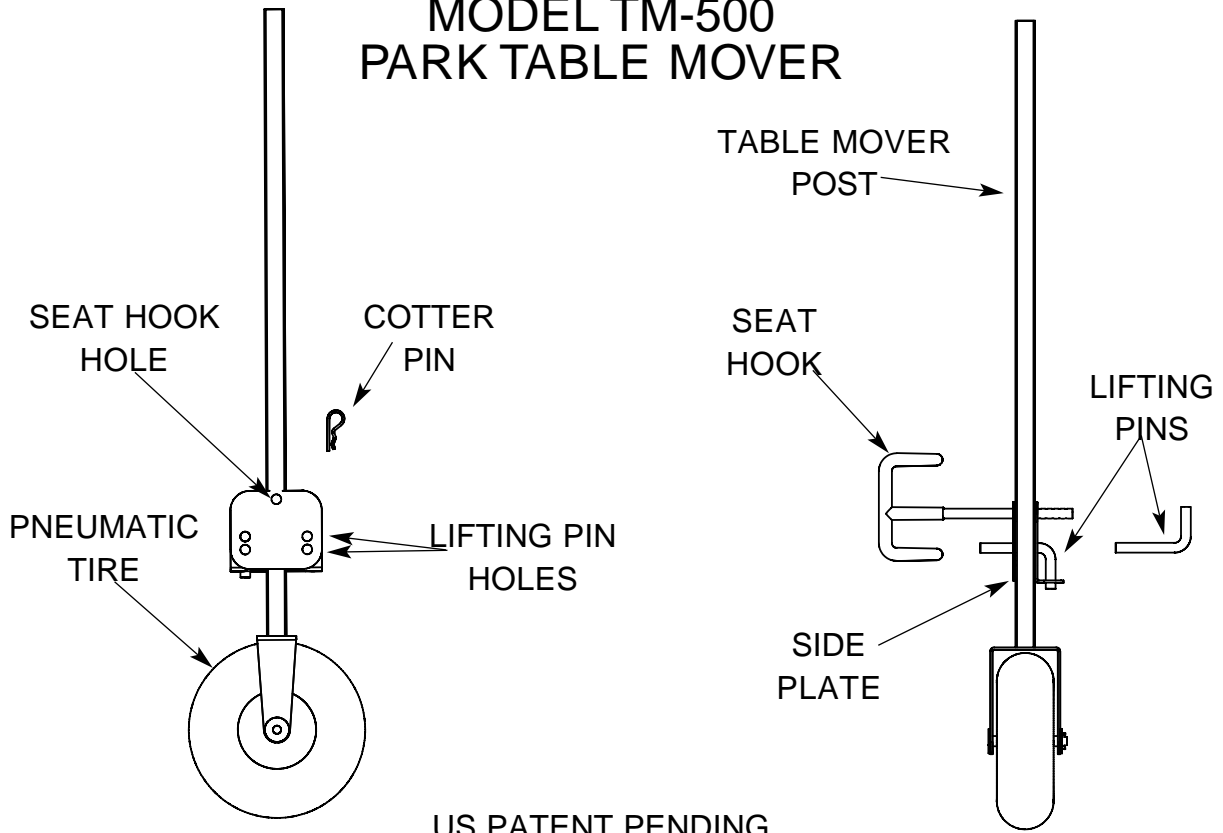

- A commercial quality tool designed for use by city, county, state and federal parks and campgrounds, commercial campgrounds and RV parks .... anyone with heavy tables that occasionally need to be moved.
- Use it to relocate tables for a special event or for seasonal storage.
- The TM-500 works independently of the frame style because it attaches to the seat plank. It will work on most table designs regardless of brand: rectangular tables up to 12 ft. long and square tables; tables with steel frames or molded plastic frames; A-frames and walk-through (skid-type) frames; tables with wood, aluminum, plastic or vinyl coated steel tops and seats.
- The design can accommodate many seat plank widths and thicknesses. It is a more universally useful tool.
- Allows one person to move heavy tables. Does not require use of motorized vehicles or licensed operators.
- Tables can be moved over most ground surfaces, low curbs, and into or out of remote areas not accessible to vehicles.
- Two large 12-inch diameter pneumatic tires provide a wide, stable platform to carry the table weight. These large tires also compensate for uneven ground surfaces and small obstacles.
- The Table Mover carries the weight of the table (up to 500 pounds) so the operator just pushes, pulls and steers.
- With the Table Mover attached near the center of the table, the total weight is balanced on the tires, giving the operator excellent control. Minimal lifting is required so there is less chance of injury.
- The simple design uses few moving pieces or loose parts.
- Hot dip galvanized finish is maintenance free. The Seat Hook is vinyl coated to protect the seat plank surface.
- Designed and manufactured by R.J. Thomas Mfg. Co. Inc., offering over 44 years of experience to the park and campground industries.
- US Patent Pending.
